EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Misha Macaw on August 5, 2009.

The application has been amended as follows:

124. (Amended) A method of producing multiple embryos from a female bovine mammal comprising:

a. creating superovulation in said female bovine mammal to create at least two eggs in each of said female bovine mammal comprising the step of using an ovulatory pharmaceutical to cause multiple eggs to be produced in said female bovine mammal further comprising the steps of:

- i) injecting a dosage of follicle stimulating hormone in each of said female bovine mammal a plurality of times a day;
- ii) administering said dosage of follicle stimulating hormone with prostaglandin F-2-alpha;

and wherein said step of injecting said dosage of follicle stimulating hormone in each of said female bovine mammal a plurality of times a day comprises injecting said follicle stimulating hormone in approximately half day increments at a dosage level of 6, 6, 4, 4, 2, 2, 2, and 2 mg between days 9 and 12

inclusive of the estrus cycle and wherein administering said dosage of follicle stimulating hormone with prostaglandin F-2-alpha comprises supplementing 25 and 12.5 mg of prostaglandin F-2-alpha on the sixth and seventh dosages, respectively, of said follicle stimulating hormone;

- b. collecting sperm cells from at least one male bovine mammal;
- c. staining said collected sperm cells with Hoechst 33342;
- d. sorting the stained sperm cells with a flow cytometer [at a rate in the range of 92 to 800 live sperm cells per second] to yield live sperm cells of a desired sex;
- e. concentrating said live sperm cells of a desired sex [to a concentration in the range of 1.6×10^6 to 5×10^6 sperm per milliliter];
- f. establishing an insemination sample having in the range of 1×10^5 to 6×10^5 [2×10^6] live sperm cells of a desired sex;
- g. inserting said insemination sample into said female bovine mammal, half the dose into each uterine horn of said female bovine mammal, 20 to 24 hours post-onset of estrus for said female bovine mammal;
- h. fertilizing a plurality of said eggs in said female bovine mammal; and
- i. producing at least two embryos of a desired sex from said female bovine mammal in which a plurality of said eggs were fertilized.

144. (New) A method of producing multiple embryos from a female bovine mammal as described in claim 124, wherein said sorting said stained sperm cells with a flow

cytometer is performed at a rate of about 500 sorts per second.

145. (New) A method of producing multiple embryos from a female bovine mammal as described in claim 124, wherein said sorting said stained sperm cells with a flow cytometer yields 700-800 live sperm of the desired sex per second.

146. (New) A method of producing multiple embryos from a female bovine mammal as described in claim 124, wherein said concentrating said live sperm cells of a desired sex comprises concentrating the live sperm cells to a concentration of about 3×10^6 to 5×10^6 sperm per milliliter.

The title has been amended to read:

--Multiple Sexed Embryo Production System for Bovine Mammals--

The following is an examiner's statement of reasons for allowance:

A. The terminal disclaimer filed on May 27, 2009 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of any patent granted on U.S. Application No. 11/536,492 has been reviewed and is accepted. The terminal disclaimer has been recorded.

B. The previous rejection of the claims under 35 U.S.C. 112, first paragraph (new matter) has been obviated by the amendments to the claims set forth in the response of May 27, 2009 and by the present amendments to the claims.

It is noted that support for the amendment to claim 124, steps d and e is found in the originally filed claims and pages 5-6 of the specification.

Support for the amendment to claim 124, step f is found at pages 19, 23 and 27 of the specification wherein it is disclosed that a low dosage of sperm is about 500,000 sperm, or 300,000 or fewer sperm and artificial insemination may be achieved using 100,000 to 250,000 sperm (page 19); wherein artificial insemination was performed using 600,000 live sex sorted sperm (page 23, lines 10-12); and wherein artificial insemination was performed using 100,000 to 200,000 sex sorted sperm (page 27, lines 9-10). Thereby, the specification provides support for establishing an artificial insemination sample having 1×10^5 to 6×10^5 live sperm cells of a desired sex.

Support for claim 144 is found at page 11, line 4 of the specification.

Support for claim 145 is found at page 23, lines 1-2 of the specification.

Support for claim 146 is found at page 21, lines 3-4 of the specification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
